

New Hope For Arthritis: Regenerative Medicine

Description

In this week's blog we will be discussing:

New Hope For Arthritis: Regenerative Medicine

Arthritis

There are many forms of arthritis and it affects about 54 million adults, and almost 300,000 babies and children. Arthritis is categorized by more than 100 different types of joint disease. The most common type is osteoarthritis. Arthritis tends to affect more women than men.

Although there is no cure for arthritis there are many different forms of treatments. Move Well MD takes a natural approach towards relieving your pain. We believe in non-surgical and alternative treatments to give you the most comprehensive care by combining the best of Western/Eastern medicine. This will allow you to start moving and functioning the way your body was designed and to prevent future problems.

One of the ways that we treat arthritis is through regenerative medicine. At Move Well MD we inject an amniotic allograft (stem cells, hyaluronic acid, growth factor, and cytokins) to relieve pain by accelerating joint repair, reducing pain, increasing bone density, and reducing the risk of adverse reactions. If you would like to read more about Regenerative Medicine use the following link to read more: <http://www.movewellmd.com/blog/what-is-regenerative-medicine>

There is no sure way to prevent arthritis, however there is a way to delay or reduce your risk for certain types. Keeping your joints healthy is key. Exercise is a big factor when it comes to avoiding the pain that is associated with arthritis.

Move Well MD will be taking part in the Arthritis Foundation's 5K walk for Arthritis in Foley Square Manhattan on May 19th 2018. We welcome anyone who is interested to walk with us. We would also encourage you to donate as we try to reach our goal of \$2,500. If you would like to donate to the Arthritis Foundation and help us reach our goal use the following link: <https://events.arthritis.org/index.cfm?fuseaction=donordrive.team&teamID=6286>

Our talented team of practitioners also offer:

Joint injections

Nerve blocks for treatment of migraines/headaches
